

Recently, the Algur H. Meadows MRI Department purchased and installed a new GE .7 Open Speed and 3T magnet. It was recommended by the vendor that we use Fry Construction for the project as they have the expertise in MRI installation. I have to admit this project went unbelievably smooth. It was completed within the time frame they stated and there were no cost overruns. Everyone associated with Fry Construction is professional and customer friendly. They updated us continually whether it was moving our shrubs and ornamental rocks, to making certain we were pleased with the lighting/cabinet arrangements. They took special care to make certain the construction did not interfere with our patient care schedule. If our schedules did conflict, Fry Construction made the proper arrangements to work around our schedule.

If there were questions or concerns on behalf of Meadows, the project engineers responded promptly and resolved the situation. It is evident that many of the employees in this company have worked together on these projects as the installation was extremely organized. We plan to purchase another 3T magnet this Fall and I have already requested the services of Fry Construction. It has been a pleasure to work with this company. I most appreciate the fact that Ben Fry and his crew stand by their word and are very trustworthy. I would highly recommend Fry Construction Company to those requiring their services.

Sincerely,

S. Todd Brooks
Administrative Director
Algur H. Meadows MRI Center
